

Mobile Payments

Simplified

Selling your goods while travelling? You can now accept payments on your smart-phone, a wireless terminal, or even an iPad. These are options Payfirma offers to businesses and salespeople, to make their payments acceptance as mobile as they are.

iPhone **Mobile Payment App**

Add a card-encryption sleeve to your iPhone, get Payfirma's Mobile Payment application, and your sales and margins will soar. This method accepts more "card-present" transactions. It provides fully-secured data flow, and transactions get approved instantly.

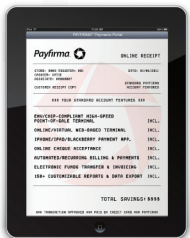

Long-Range **Wireless Terminal**

Driving a taxi, delivering pizza? Payfirma's NBS5600 is just the gadget you need. Our versatile portable terminal increases speed and efficiency of in-the-field transactions, operating on Rogers Wireless™ General Packet Radio Service (GPRS) network.

Touch-Tone **IVR Processing**

Just starting up and business volume slow to pick up? Why not get paid immediately on delivery? Our Interactive Voice Response (IVR) system works on any phone. It is the most cost-effective means of accepting credit cards.

iPad **Mobile Payment App** ...Coming Spring 2011

Payfirma is rolling out a Mobile Payment application for iPad, to expand the iPhone version, increasing its flexibility, adding more transaction features, and much more!
