

Credit Card Acceptance Simplified

Each business has specific needs for credit card terminals. Payfirma respects that. We offer a wide range of the latest best-in-class credit card terminals customized to your requirements. Accepting credit cards for your business has never been easier, faster, or more cost-effective!

Wired **Vx 810** Point-of-Sale

The most powerful and fully loaded point-of-sale unit on the market today, that is Payfirma's Vx 810 by Verifone. It has been designed specifically to give merchants the flexibility to grow and expand over time. Chip and PIN compliant, using Payment Card Industry (PCI) Security standards to ensure secure data transfer, this modular system is ready for plug-n-play use.

You can get help when handling more operations than usual, using the optional contactless module. A base unit linked to a printer gives you a complete countertop payment solution. The Vx 810 offers retailers all they want and need from a PIN pad.

Wireless **Vx 670** Point-of-Sale

The world's smallest all-in-one short-range wireless handheld payment device, the Vx 670 by Verifone is a sleek and secure handheld point-of-sale terminal. Customers like using equipment they can see, particularly in restaurants, bars and stadiums. The wireless connection makes it more practical.

You can drop your Vx 670, spill your beverage on it, and it still won't fail. It uses the General Packet Radio Service (GPRS) to make it work in about 200 countries around the world, as well as the WiFi and Bluetooth communications technologies. Chip and PIN compliant, the Vx 670 represents a radical departure from all previous systems.
